

## The user-oriented screenreader for the blind and visually impaired

COBRA simplifies working with Windows 7, 8 and 10 for computer users who are blind or visually impaired. COBRA provides important information from the computer screen in speech, braille, or magnified form.

Discover the new COBRA 11! It is more powerful, more flexible, and much faster than all previous versions of COBRA. COBRA includes a convenient First-run Wizard for smooth and easy setup based upon your individual needs or preferences. Try COBRA 11 today!

- Operates easily and intuitively
- Now compatible with Windows 8 and 10
- NEW: supports MS Office 2016
- Navigates comfortably in tables and Opens web pages faster with the revised version of COBRA-Explorer
- Clear and natural-sounding text-to-speech with Nuance Vocalizer TTS
- Free updates for four years
- Provides output in speech, braille, and/or screen magnification

## Braille presentation:

As an aid to training, the output of the braille display is shown on the monitor in text form. COBRA uses a powerful braille engine to optimise the braille output. COBRA can switch between braille Grade I and Grade II at the press of a button. Inputting braille via the PC-keyboard is also possible. COBRA also offers two additional features:

- **Splitting the braille display:** various types of information can be presented on one braille display by dividing it into user defined sections
- **Supporting multiple braille displays:** different models of braille displays can show the same

Terminal Server, Citrix, and remote desktop environments now flow seamlessly. The locally installed braille display accepts the output of the terminal server, and uses all of the scripts from the remote system. The screen magnification follows the structure and menu on the remote systems.

## The TASO® principle:

The highly acclaimed TASO® sliders provide COBRA users a quick overview of the contents of a computer screen. TASO® represents two dimensions of a computer screen using optional vertical and horizontal sliders combined with acoustic signals.

## Screen Magnification

COBRA Zoom is a powerful screen magnifier. It is controlled quickly and easily from the PC-keyboard or the optional TASO® sliders. The magnification ranges from 1x to 32x with full control of the presentation, i. e. colours, contrast and positive or negative images. There are a wide variety of magnification features: full screen magnification, split screen views, magnifying glass with enhanced edge smoothing, etc. COBRA Zoom also supports Terminal Server workplaces.

"COBRA works easily and accompanies the user daily at his work."

*Günter Christmann, Product Manager*

## New Navigation Functions in tables with the COBRA Explorer:

Thanks to our new table navigation commands, you can easily navigate through cells in a table. It is now possible in COBRA to choose what to present, what not to present, and the reading order. The table navigation commands can now also be used in PDF files with tables.

## Improved Positioning of the Magnified Area:

COBRA improves the positioning of the magnified area. When a window appears on the screen, COBRA tries to position the magnified area in a way that does not hide the window, or its label.

## Magnification Supported at All Times:

With COBRA, you can access the magnification functionality even when running your PC in Windows Safe Mode. Useful for times when computer system repair is required.

## Adjustments and Optimization for many programs:

- Adjustments and fixes for Microsoft Office: Word, Excel, Access and Outlook
- Further optimization of the e-mail program Thunderbird
- Improved support for JAVA applications
